

TUCSON ARIZONA  
Department of Psychology

Hello and thank you for your interest!  
What makes people with Down syndrome different from one another?  
What can some do well, and what is more challenging for others?  
Our studies at the UofA are trying to answer these questions. If your child has been diagnosed with Down syndrome, and you would like to obtain more information about the studies, please contact us.

# **Our Research**

## **Learning in Toddlers**

**We are planning to study how infants and toddlers acquire language. We are also interested in the effect of sleep or sleep problems on their learning.**

## **Learning in Adolescents**

**We are planning to study the cognitive performance of children with Down syndrome, to determine relative areas of strength and weakness.**

## **Learning in Adults**

**We are planning to study how cognitive function changes as individuals with Down syndrome age.**
